

TLAP Comments from TIE 2009 Conference Participants

"We need a good statewide assessment for technology literacy. I'm glad to see a group working toward this goal. If you need another pilot school for year 2, please let me know."

"I appreciate all this work being compiled in an easy to use format. The standardization factor between districts is also helpful. I don't have the knowledge or time to design a high-quality assessment for this required data."

"...interested in having access to this assessment - great way to determine where to focus ongoing instruction"

*"- I really like the online capabilities, security and admin opportunities.
- Standards - all 6 targeted!
- Tech assessments need to be assessed in lab, not in classroom
- I like the ease of sharing the progress and reports of students"*

"We are very interested in bringing TLAP to our district and are EXTREMELY interested in seeing a Teacher/Administration version!"

"This looks like a positive tool for this otherwise Unfunded Mandate! My question is how do my districts sign?"

"Awesome!"

"How can we help get this available to all districts in Colorado? What a great project. I would like to get our districts in your pilot/second year work."

"I think this is great - I would like to see this worked out for the 5th grade assessments. I also would be willing to help out on the 5th grade assessments if needed."

"I would like more information on this and to do a trial w/ my students as a pre- and post-assessment, so that I could better assess my students' skill levels."

"I think the online assessment is greatly needed and useful-better than on paper. I just wonder the scope of a multiple choice format."

"I would love to see a pre-assessment developed for delivery during 7th grade to prescribe remediation in 8th grade. Also, development of staff assessment based in NETS 2008 and NETA 2009 would be a great follow up."

"This project is important for Colorado schools. As a middle school technology teacher I find a consistent, valid assessment used throughout the state necessary for all Colorado schools."

"Consider pre-test at 6th grade. This gives 2 years to prepare for 8th grade assessment. The project makes sense to calibrate all state results."

"If we truly want to compete on a global level - this is a no-brainer. 8th grade is an excellent age to begin testing- Not being technology literate is like being unable to tie your shoes."
